

Product: rhAmp Reporter Mix, 1250 μ L

Product number: 1076028

Batch number: 0000487446

Expiration date: 2020-JUL-08

rhAmp Reporter Mix is optimized for use with rhAmp Genotyping Master Mix and rhAmp SNP Assays. The formulation includes proprietary reporter-dye-labeled oligonucleotide probes for assessing specific allelic discrimination on select instrument platforms that do not require a passive reference.

Analytical testing		
Test	Specification	Results
Molecular weight by ESI	± 2.8 Da of target mass of each oligonucleotide in mix	Pass
Reporter probe concentration by RP-HPLC	$\pm 10\%$ of target concentration of each reporter probe in mix	Pass

Analytical test methods:

Molecular weight (MW) of the individual components of the mix is assessed after formulation and verified by ESI (electrospray ionization).

Concentration of each individual oligo within the mix is analyzed by a proprietary RP-HPLC method.

Functional testing

rhAmp Reporter Mix is tested for allelic discrimination performance using rhAmp Genotyping Master Mix and a rhAmp SNP Assay targeting 1000 copies of double-stranded gBlocks Gene Fragment template. PCR cycling and analysis is performed using the Bio-Rad CFX384 Touch™ Real-Time PCR System.

Test	Result
Allelic discrimination	Pass

Allelic discrimination plot

Storage: Store rhAmp Reporter Mix in a sealed container at –20°C, protected from light.
