

Think bigger. Design without limits.

Complex DNA made possible with Integrated DNA Technologies (IDT) x Ansa

IDT x Ansa unlocks the most complex DNA—
so your ideas can become real

We synthesize what others can't

 ITRs & inverted repeats Complete AAV ITRs and complex motifs	 Extreme GC content 10%–94% GC within any 50 bp	AAAAA Homopolymers & PolyA tails Up to 80 bp homopolymers	TTTT Tandem repeats & palindromes Short & long repeats
 Promoters & UTRs Complex regulatory elements	 VHH & CDR domains High-complexity antibody regions	 Large constructs From 25 bp to full-length 50 kb constructs	

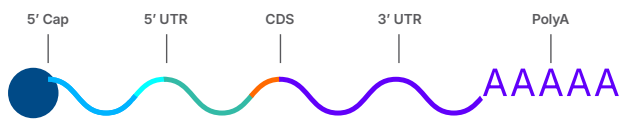

**No sequence optimizations. No workarounds.
Just the DNA you designed.**

Applications unlocked across today's most ambitious programs

1 mRNA & Gene Therapy

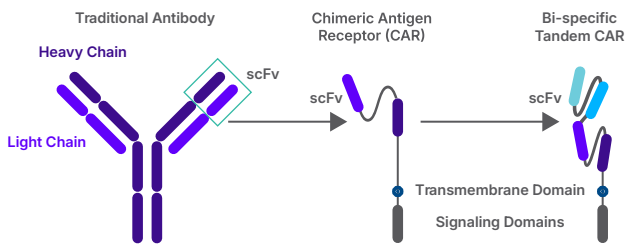

Long constructs. Complex UTRs. PolyA tails. Optimized expression.

2 AAV & CGT Vectors

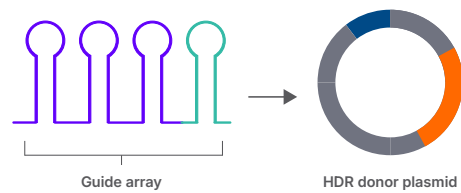

Full ITR-flanked cassettes and variant panels for AAV optimization.

3 Complex Antibodies

Bispecifics, multispecifics, VHH bolt-ons, tandem VHH, and next-gen CART-T.

4 CRISPR & HDR Donors

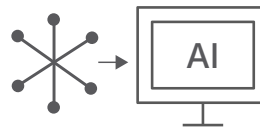

Multiplex guides and complex large HDR donor plasmids.

5 Synthetic Biology & BGCs

Complex promoters, GC-rich genes, pathways, and entire biosynthetic gene clusters (BGCs).

6 AI-Designed Sequences

Bring novel, de novo designs from generative models to life.

Impact

Rapid neoantigen cassettes

Faster turnaround for complex templates enabling personalized therapeutic development¹
